One day in Boston

Purpose: It can be both thrilling and frustrating to plan a trip on our own since it requires us to collect information from various sources back and forth before we can finalize everything into a file. What if we can spend less time generating our own travel plans in one step? With this website, users can customize their travel plans based on their preferences. By answering simple questions, a well-developed one-day travel plan will be made and users can save it as a picture so whenever they want to set off, they will be ready to go immediately.

Audience: Travel lovers who are seeking personalized traveling experiences but don't have time to do research.

Technology plan to use: JavaScript libraries, CSS, HTML

Challenges or risks: Logic between different sections should be developed. For instance, dining options should be suggested based on the location of the user's selected attractions or hotel. To provide relevant recommendations, the website will need to gather and analyze data from various travel websites such as Expedia, TripAdvisor, or Yelp.

Contingency plan: Customers are categorized through questionnaires and travel plans are presented according to customer categories.
